

Creating a Reddit APP

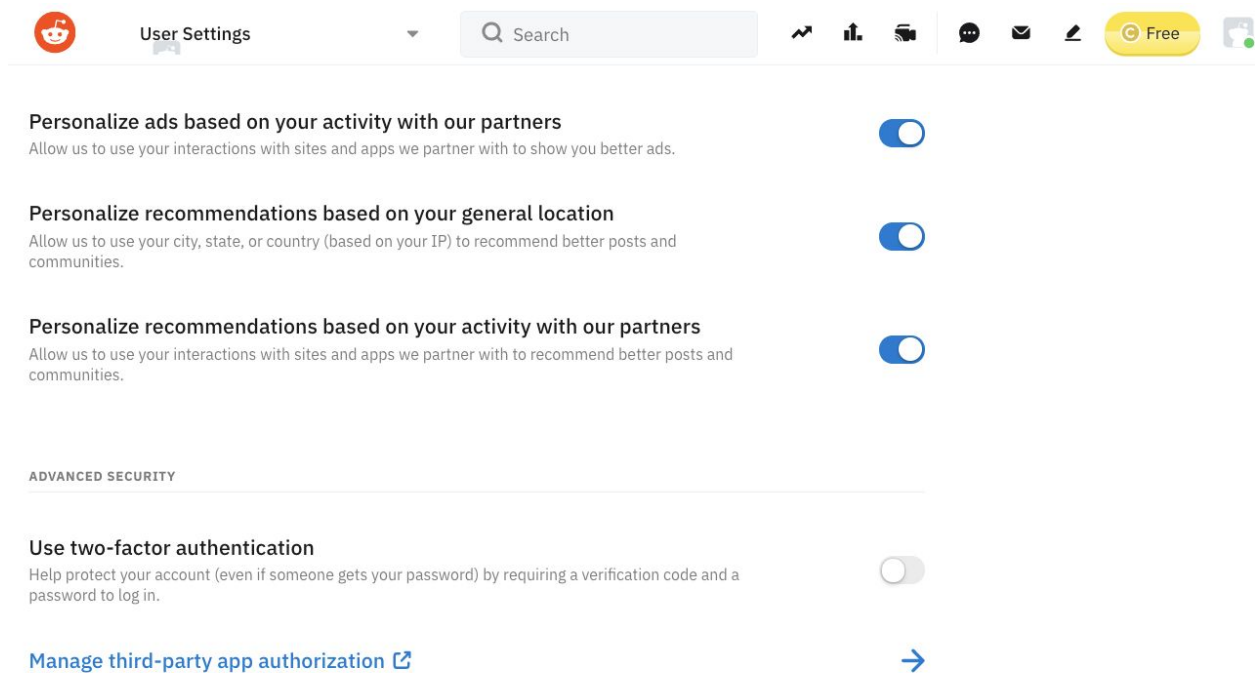

Step 1: Create a Reddit account:

Easy way to create an email: <https://protonmail.com/>

Easy way to create a Reddit username: <https://perchance.org/reddit-username>

Step 2: Create an app:

Go to Settings -> Safety & Privacy -> Manage third-party app authorization

The screenshot shows the Reddit User Settings interface. At the top, there's a navigation bar with the Reddit logo, 'User Settings', a search bar, and various icons. Below this, the 'Personalization' section is visible, containing three toggle switches, all of which are turned on. The first toggle is for 'Personalize ads based on your activity with our partners', the second for 'Personalize recommendations based on your general location', and the third for 'Personalize recommendations based on your activity with our partners'. Below this section is a header for 'ADVANCED SECURITY'. Under this header, there is a toggle for 'Use two-factor authentication', which is currently turned off. At the bottom of the visible settings, there is a link 'Manage third-party app authorization' with an external link icon, which is the target of the instructions in the text above.

Personalize ads based on your activity with our partners
Allow us to use your interactions with sites and apps we partner with to show you better ads. ☒

Personalize recommendations based on your general location
Allow us to use your city, state, or country (based on your IP) to recommend better posts and communities. ☒

Personalize recommendations based on your activity with our partners
Allow us to use your interactions with sites and apps we partner with to recommend better posts and communities. ☒

ADVANCED SECURITY

Use two-factor authentication
Help protect your account (even if someone gets your password) by requiring a verification code and a password to log in. ☐

[Manage third-party app authorization](#) 

The application needs to be a script application.

create application

Please [read the API usage guidelines](#) before creating your application. After creating, you will be required to [register](#) for production API use.

name

☐ web app A web based application

☐ installed app An app intended for installation, such as on a mobile phone

☒ script Script for personal use. Will only have access to the developers accounts

description

about url

redirect uri

Step 3: Copy personal use script and secret

developed applications

**meager_narration**
personal use script

change icon
